

INVESTOR PITCH DECK

MGOS GOLD

Autonomous Multi-INT Fusion Engine

SEED ROUND PROSPECTUS

1. THE HOOK

MGOS GOLD is a new class of defense analytical engine. It fuses OSINT, SIGINT, and CYBER data to detect escalation thresholds in real-time. It is NOT a dashboard. It is a Decision Engine.

2. THE PROBLEM

Linear models fail in nonlinear warfare. Analysts drown in 'Average Dilution' - where critical signals are washed out by noise. Legacy systems (Excel/SIEM) miss asymmetric attacks.

3. THE SOLUTION

Nonlinear $\Phi(x)$ Logic + Fractal Architecture. MGOS forces escalation when a single critical vector is breached. It explains reality instead of just describing it.

4. VALIDATION (The Money Slide)

Benchmark Test Result:

- Linear Model: 0.27 (Failure/Silence)
- MGOS GOLD: 1.00 (Critical Alert)

We mathematically proved superiority in asymmetric scenarios.

5. TECHNOLOGY

Secure Trusted Core Layer (STCL). Air-Gapped architecture. Dead-Man's Switch technology. Fractal scaling from drone to HQ.

6. MARKET

Dual-Use Technology:

1. Defense/GovTech (HQs, Agencies)
2. Commercial (Banking, Energy, Critical Infra)

Positioned as a core decision engine.

7. BUSINESS MODEL

Revenue streams:

- Annual Licenses (ARR)
- Paid PoC Fees (40-120k EUR)
- Maintenance & Support

8. THE ASK

Seeking 150k - 300k EUR Seed Funding for:

- MGOS 2.0 STCL Core development
- Production UI/UX
- Security Certification
- First paid PoC deployment
